

## BODY FAT ANALYZER

The Body Fat Analyzer assists in measuring the body-fat percentage, fat percentage, muscle percentage, bone-mass percentage and ideal body-fat percentage, besides weight and suggested calorie intake. This touch switch device features a manual metric system setup with a robust internal memory that can store age, sex and height related data for 9 different people.

## OXIMETER

The Oximeter helps measure the SpO2 value and pulse rate value of an individual with the placement of a finger. This lightweight device features a monochrome OLED display, audible and visible alarm function and a continuous working time of over 30 hours. It records and wirelessly transmits information pertaining to the oxygen saturation level and volume in the blood.

## ADVANTAGES

- ◆ All VESAG devices are developed to assist in the administration of efficient healthcare and security of individuals, while being accurate and user-friendly.
- ◆ The ability to manage thresholds and automatic alerts for attention make the devices suitable for patients with hypertension, diabetes, history of heart disease, etc., who need to be monitored on a daily basis.
- ◆ The ability to set Geo-limits on the GPS tracker makes it exceptionally useful for tracking patients with Alzheimer's or dementia and even in case of kids and working women.
- ◆ The availability of medical history and records over the web makes care-giving a less time consuming process.
- ◆ The SOS feature that allows for the placement of calls to the support center can help deal with emergency situations promptly and proves a suitable companion for travelers.
- ◆ The 24/7 support offered by our call center makes emergency response spontaneous and effective, as emergency response teams are instantly alerted whenever a threshold is crossed or SOS calls are placed, thereby avoiding catastrophes.

The VESAG range of products and services are best suited for individuals who would like to monitor the health of their elderly dependants, caregivers of patients with dementia or Alzheimer's, health conscious individuals and anyone who would want to be in tune with the health and safety developments of their loved ones.

**VESAG**  
*Personalized Health Support  
Anywhere*

**HIGH QUALITY  
PRODUCTS FROM  
VESAG**

At VESAG, we specialize in providing new age, digital healthcare solutions for the elderly, fitness conscious and caregivers. In keeping with the unique demands of a rapidly changing society, we offer mobile-based personal emergency response solutions that focus on pre-emptive care. Our line of healthcare products and services provides advanced diagnostic and health management facilities along with being environment conscious.

Medical professionals lay stress on the importance of pre-emptive medical care to effectively manage life threatening emergencies like cardiac arrest, stroke, etc. Vesag's line of products is geared towards fulfilling this requirement by putting in place a holistic health management plan that monitors vital health parameters on a constant basis. Every product is designed to offer health care with security. The range of products offered is not only for those with critical illnesses, but also who are health conscious and like to monitor their fitness levels.

## HEALTHCARE HIGHLIGHTS

- ★ **INDIVIDUAL WELLBEING** – Our products have been designed to provide medical care along with security. While the various healthcare devices keep a track of the key parameters of an individual, the inbuilt GPS tracking system of the watch helps trace their location.
- ★ **PROACTIVE SUPPORT** – Our products and services are backed by a 24/7 customer support center that maintains the customer database, handles distress calls, monitors medical thresholds and geofences, arranges for emergency response teams and contacts people on the emergency list.
- ★ **LATEST TECHNOLOGY** – Our entire range of products uses the most advanced technological innovations that combine the use of elements such as GPS systems, mobile signals and power of the web to present matchless health and security solutions.

## THE VESAG WATCH

The VESAG watch features a built-in GPS tracker, SOS button to send out distress signals, built-in microphone and speaker, medicine/task reminders, a highly reliable G-sensor /fall detection and alert facilities for holistic health management that combines wellbeing with safety. By recording and transferring 17 different health parameters such as pulse, blood pressure and blood sugar for analysis and pre-emptive medical help, it makes for a 24/7 health monitor.

## BLOOD PRESSURE MONITOR

The Blood Pressure Monitor features a LCD digital display, 80 sets of memory with recall and automatic inflation/deflation facility. A compact and lightweight device, the monitor can measure blood pressure, both Systolic and Diastolic, as well as pulse from the individual's arm. It is ideal for patients suffering from hypertension, as it can easily be used in case of emergency.

## HEART RATE MONITOR

The Heart Rate Monitor not only keeps a check on the heart rate of the individual, but also features an ECG reader, Skin Temperature reader and Pacemaker reader. This multifunctional device transmits the collected data using wireless mobile technology.

## ECG

The ECG device facilitates the measurement of a single channel ECG anytime, anywhere. It is a portable, user-friendly device that is capable of analyzing and presenting 8 types of arrhythmia, storing and reviewing at least 24 records and transmitting data to the PC for future analysis.
