## IMPORTANCE OF PRE-EMPTIVE MEDICAL CARE

Medical experts recognize the importance of recognizing early signs of a medical emergency which can often be the difference between life and death. The Vesag range of products provides early diagnostics of medical emergencies by keeping a tab on crucial biometric indicators 24 hours a day.

## TAKING CARE OF YOUR PARENTS

Working abroad does not mean that you cannot take care of your parents. Thousands of miles away you can still ensure that your parents stay healthy by enrolling them in Vesag's state of the art health management system.

The human body weakens considerably with advancing age and this is often compounded by health issues like blood pressure, irregular heart rate, blood glucose etc. According to studies a high proportion of mortality in the elderly is due these factors.

What your parents need is a comprehensive health plan that-

- ◆ Takes an holistic view to health.
- ◆ Provides real time information.
- ◆ Takes a pre-emptive approach instead of reactive approach.
- ◆ Round the clock medical assistance.

The Vesag line of health care products provides these and a lot more ensuring that your parents have easy access to world class health management system.

## HEALTH PARAMETERS TRACKED

- ◆ **Heart Rate:** Extremely critical because heart rate above 80 beats per minute in the elderly can be fatal. This should be monitored if the patient suffers from other health issues like blood pressure and diabetes.

- ◆ **Blood Pressure and Blood Glucose:** Blood pressure and blood glucose are important indicators of health. High blood pressure (systolic) can lead to giddiness and tiredness in the elderly. Untreated blood glucose can lead to coma and increases the chance of mortality due. Experts advise constant monitoring of such patients in order to prevent emergencies.
- ◆ **ECG:** This parameter is extremely handy for measuring vital signs like the heart beat. Regular monitoring can help in the prediction of heart ailments allowing remedial measures.
- ◆ **Body Fat Composition:** Body fat composition decreases with age making the human body susceptible to various types of illness. Therefore there is a need to track it on a regular basis.
- ◆ In case of the elderly these biometric indicators are a reliable indicator for monitoring the health status with the aim of providing pre-emptive medical assistance before the onset of a medical emergency.
